Executive Summary

Viajaly is a content-strong site let down by a thin technical layer. The four public service landings (home, passaporte, roteiros, milhas) are static HTML with correct pt-BR language, unique descriptive titles and genuinely rich, specific copy — clear pricing, five-step processes, real FAQs and WhatsApp testimonials — and the site ships a well-formed llms.txt, an advanced GEO signal most competitors lack. The single most urgent gap is structured data: there is **zero JSON-LD anywhere**, so none of that FAQ, pricing or organisation information is machine-extractable for Google rich results, AI Overviews or voice answers. The biggest quick win is adding Organization + FAQPage + Service schema and fixing the app-wide html lang="en" declaration on an all-Portuguese site.

Dimension	Score	Status	Key Takeaway
SEO	6/10	On Track	Clean URLs, unique landing titles, valid robots + sitemap — but no canonical tags or schema, and app pages declare the wrong language.
GEO	6/10	On Track	Strong entity clarity, factual density and a real llms.txt; held back by missing Organization schema, sameAs links and named-author E-E-A-T.
AEO	4/10	Needs Work	Every service page has FAQ and step content, but with zero FAQPage/HowTo schema none of it can win snippets or voice answers.
Combined	16/30		Solid content foundation; a focused structured-data + technical pass would lift all three dimensions quickly.

Pages Audited

Every page fetched during the crawl, with the key observation for each.

URL	Page Type	Notes
viajaly.com/	Homepage (static HTML)	lang=pt-BR, unique title + description, rich copy. No schema, no OG/canonical.
/passaporte	Service landing (static)	~1,800 words, FAQ + 5-step process. No schema.
/roteiros	Service landing (static)	~2,100 words, FAQ + pricing tiers. No schema.
/milhas	Service landing (static)	~1,850 words, FAQ + pricing tiers. No schema.
/orcamento	Lead form (React)	Own title + description. Inherits html lang=en. No schema.
/privacidade	Legal (React)	LGPD policy. Own title. lang=en.
/vistos	Service landing (React)	Exists in code with a title, but returns HTTP 404 live and is absent from the sitemap.
/robots.txt	Crawl directives	Good: disallows /portal, /console, /api; references sitemap.
/sitemap.xml	Sitemap	6 URLs with priority + changefreq. No lastmod. /vistos not listed.
/llms.txt	AI crawl guide	Present and well-formed — strong GEO signal.

SEO Analysis — 6/10

Technical On-Page

Signal	Finding	Status
Title tag	Static landings each have a unique, descriptive title (e.g. “Passaporte — Viajaly Seu passaporte pronto antes do visto”). React pages set their own too.	Good
Meta description	Home + orcamento + privacidade have tailored descriptions. React default is a generic fallback shared by any page that doesn't override.	Needs Attention
Heading hierarchy	Single clear H1 per page with logical, keyword-relevant H2/H3s. No stuffing observed.	Good
Canonical tag	No canonical tag on any page — static landings or React routes.	Missing
html lang	Static landings correct (pt-BR). All React pages inherit lang=“en” from __root.tsx on a Portuguese site.	Needs Attention
robots.txt	Correctly allows crawl, disallows /portal /console /api, and references the sitemap.	Good
Viewport / mobile	Viewport meta present on all pages.	Good
Open Graph / Twitter	React pages carry OG/Twitter from root, but og:image is a lovable.app preview screenshot and card is “summary”. Static landings have NO OG/Twitter tags at all.	Needs Attention
URL structure	Clean, short, readable, keyword-relevant paths (/passaporte, /roteiros, /milhas).	Good

Content Quality

Signal	Finding	Status
Word count	Service pages ~1,800–2,100 words — well above the threshold for depth.	Good
Keyword signals	Primary topic and semantic terms clearly established (visto americano, DS-160, passaporte, milhas, roteiro).	Good
Freshness signals	No visible publication/update dates; sitemap has no lastmod.	Needs Attention
Readability	Scannable — short paragraphs, subheadings, step lists, testimonials.	Good

Structured Data

Signal	Finding	Status
JSON-LD / microdata	None found anywhere in the codebase or rendered pages.	Missing
Schema types	No Organization, LocalBusiness, Service, Product/Offer, FAQPage, HowTo or BreadcrumbList.	Missing

GEO Analysis — 6/10

GEO optimises for AI-powered engines (Perplexity, ChatGPT Search, Google AI Overviews, Gemini) that synthesise and cite sources. These reward clarity, authority and factual richness.

E-E-A-T Assessment

Signal	Finding	Status
Author information	No named authors or stated credentials. A consultant name (“Letícia”) appears in copy but without a bio/authority block.	Needs Attention
About / who runs it	No dedicated About/Team page explaining the agency, its people or qualifications.	Missing
Contact information	WhatsApp-led contact and a lead form present; no visible address/NAP block.	Needs Attention
Trust signals	Real WhatsApp testimonials and an honest “no visa guarantee” disclaimer build credibility.	Good
Organization schema	No Organization entity declared (name, logo, url, sameAs).	Missing

Content for AI Synthesis

Signal	Finding	Status
Factual density	High — specific prices, government fees (US\$185), a concrete 5-step process.	Good
Clear claims	Core value proposition stated plainly at the top of every page.	Good
Entity clarity	Brand “Viajaly” named consistently throughout.	Good
Comprehensiveness	Each service page fully addresses its topic with FAQ coverage.	Good
Originality / POV	Distinct positioning (“nem tutorial solto, nem advogado caro”) gives a citable angle.	Good

Technical GEO

Signal	Finding	Status
llms.txt	Present and well-formed: brand summary + linked page index for AI crawlers.	Good
HTTPS / security	Site served over HTTPS.	Good
Crawlability	Static landings are server-rendered HTML (AI-crawler friendly). React routes are more JS-dependent.	Needs Attention
sameAs / social links	No outbound social-profile links to strengthen the entity graph.	Missing
Rich schema types	No Author, Dataset, or ClaimReview markup.	Missing

AEO Analysis — 4/10

AEO optimises for featured snippets, People Also Ask and voice search — where engines must extract a direct, concise answer.

Featured Snippet Eligibility

Signal	Finding	Status
Direct answer paragraphs	FAQ answers exist in prose but aren't structured as 40–60 word answers under question headings.	Needs Attention
Definition patterns	Services are described clearly but without explicit “X é...” definition sentences.	Needs Attention
List content	Numbered 5-step processes on every service page — strong list-snippet potential.	Good
Table content	Pricing tiers presented; could be marked up as comparison tables.	Needs Attention

Structured Answer Formats

Signal	Finding	Status
FAQ schema	Every service page has a real FAQ section, but NO FAQPage JSON-LD — the biggest single AEO miss.	Missing
HowTo schema	5-step processes are ideal HowTo candidates but are unmarked.	Missing
Question-phrased headings	Section headers use objection framing (“Não sei o que levar”) rather than natural questions (“Como renovar o passaporte?”).	Needs Attention
Speakable schema	No SpeakableSpecification markup for voice sections.	Missing

Voice Search Readiness

Signal	Finding	Status
Conversational language	Copy is natural and conversational in pt-BR.	Good
Long-tail coverage	FAQs address specific who/what/when/how questions about visas, passports and miles.	Good
Local signals	No NAP data or LocalBusiness schema (may be intentional for a digital-first service).	Needs Attention

Priority Recommendations

Ordered by urgency. “Effort” and “Impact” are relative estimates to help sequence the work.

Priority	Issue	Dimension	Effort	Impact
Critical	Add JSON-LD sitewide: Organization + sameAs, FAQPage on the 4 landings, Service/Offer with pricing, BreadcrumbList. Zero schema today.	All	Med	High
Critical	Fix html lang="en" → "pt-BR" in src/routes/___root.tsx:110 (all React pages on a Portuguese site).	SEO/GEO	Low	High
High	Give the 4 static landings their own Open Graph + Twitter tags and a self-referencing canonical (they currently have none).	SEO	Low	High
High	Resolve /vistos: it 404s live but exists in code with a title. Deploy it + add to sitemap, or remove the route and any links.	SEO	Low	Med
High	Add named-author / agency E-E-A-T signals (who runs Viajaly, credentials) to strengthen the entity for AI engines.	GEO	Med	Med
Medium	Replace og:image (a lovable.app preview screenshot) with a branded stable asset; set twitter:card=summary_large_image.	SEO/GEO	Low	Med
Medium	Mark up the 5-step processes with HowTo schema and expose question-phrased FAQ headings for AEO.	AEO	Med	Med
Quick Win	Add <lastmod> to sitemap entries so crawlers see freshness.	SEO	Low	Low

What's Working Well

Genuine strengths observed during the crawl — keep and build on these.

Content depth & specificity	Service pages run 1,800–2,100 words with concrete pricing (R\$197 / R\$397 / R\$697), a named 5-step process, and real WhatsApp testimonials — exactly the factual density AI engines cite.
llms.txt present	A clean, structured llms.txt describes the brand and lists every key page for AI crawlers — an advanced GEO signal most sites lack.
Correct language on landings	The static landing HTML correctly declares lang="pt-BR" with unique, benefit-led titles per page.
Clean site hygiene	HTTPS everywhere, readable keyword-relevant URLs, and a robots.txt that correctly shields /portal, /console and /api while pointing to the sitemap.
Clear entity & value prop	The Viajaly brand name and its core promise are stated consistently and plainly at the top of each page — strong entity clarity for generative engines.

Glossary

SEO — Search Engine Optimization. Getting a site found and ranked on traditional search engines (Google, Bing) through titles, metadata, headings, links, structured data and content quality.

GEO — Generative Engine Optimization. Making a site easy for AI answer engines (Perplexity, ChatGPT Search, Google AI Overviews, Gemini) to understand, trust and cite — through entity clarity, authority (E-E-A-T), factual density and machine-readable data.

AEO — Answer Engine Optimization. Structuring content so search engines and assistants can extract a direct answer for featured snippets, People Also Ask and voice search — via FAQ/HowTo schema and question-phrased, concise answers.
